

DBF Retains National Industry Rankings for 2017

For the ninth consecutive year, Davis, Bowen & Friedel, Inc., (DBF) has been listed within the nation's top 300 architecture, engineering, and construction (AEC) firms by *Building Design+Construction* magazine. As noted in the July 2017 "Giants 300 Report", DBF was the only Eastern Shore-based firm in the group, coming in at #35 among the list of other Engineering/Architecture firms.

Building Design+Construction magazine, a Scranton Gillette Communications (SGC) publication, annually ranks the largest commercial AEC firms in the nation based on reported data which includes building-type revenue, green building work, building information modeling (BIM) revenue, and other criteria. Building sectors recognized by the nationally distributed publication include education, retail, healthcare, commercial office, multi-family residential, hotels, transit, and recreation/sports.

Since its inception in 1983, DBF has been providing professional architectural, engineering, and surveying services to clients located both on and off of the Eastern Shore. Just a few of the recent Maryland projects which contributed to DBF's ranking included landscape and site design for Salisbury's Riverwalk, as well as engineering services to improve streets in Crisfield. The firm also provided multiple services for the new Fire Station #3, soon to be constructed, in Berlin. Within Delaware, DBF provided civil engineering services for several resort area subdivisions, the Milford Pump Station rehabilitation project, and multiple engineering and architecture projects at the Dover Air Force Base.

"Continuously being ranked as one of the country's top engineering/architecture firms is not only rewarding to us as a firm," stated DBF president Michael Wigley, AIA, "but it is also an indication of the continual growth of the Delmarva Peninsula and the interest this area holds for the incoming businesses, retirees and flourishing industries."

Davis, Bowen & Friedel, Inc., is a full-service architectural, engineering, and surveying firm with offices in Salisbury and Easton, Maryland, and in Milford, Delaware.
